

Product Page Image Refresh

ascinternational.com

PREPARED FOR

ASC International

PREPARED BY

Winfield Technologies Inc.

DATE

August 31, 2026

STATUS

Live in production

We replaced the product photography on **nine product pages** with new equipment renders and reworked the image frame those photos sit in so they display consistently across **all sixteen** product pages. Every image was resized and compressed for fast loading. All changes are committed to the site repository and live.

PRODUCT PHOTOS UPDATED

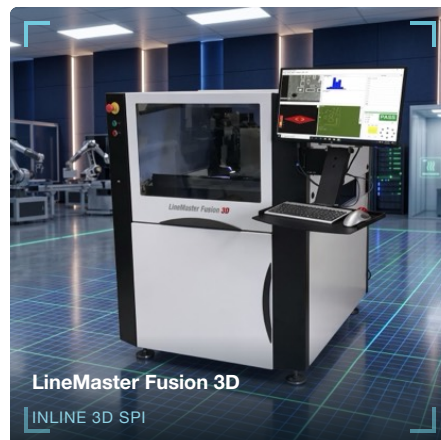

IMAGE FRAME IMPROVEMENTS

Applied to all sixteen product pages, so future photo swaps drop in cleanly and every page matches.

■ Frame fit

The new photos carry full backgrounds, unlike the older cutout shots. The frame now holds each photo neatly inside the corner brackets instead of crowding them, with the photo corners rounded.

■ Consistent sizing

Every product photo is locked to the same display height, so the nine pages read as one set rather than a mix of shapes and scales.

■ Spacing dialed in

We set the gap between the corner brackets and each photo to a tight, deliberate margin — close, but not touching.

■ Label placement

On the Fusion 3D page the “PSI 1500” badge had been sitting on top of the machine. It now sits above the frame, clear of the photo.

PERFORMANCE

Each new render arrived at 2–2.6 MB. We resized every one to roughly 1280 pixels and recompressed it, bringing them down to about 200–330 KB — a six- to ten-fold cut in page weight that keeps the product pages fast on mobile.

HOW THE WORK IS TRACKED

Every change is committed to the site’s GitHub repository and deploys to production automatically on push. The commits behind this report:

2061bff	VisionPro HSi + Fusion 3D photos
01b6e66	Frame — clear corner brackets, move Fusion badge out
5bef680	Frame — square aspect ratio, fit whole photo
3a653aa	Frame — shrink to hug the photo
1d868e6	Frame — tighten further
c5447bd	Frame — back off to final spacing
6143407	LineMaster DMI photo
86f81be	VisionPro AP500 photo
244cfd1	VisionPro SP3D photo
87a968a	VisionPro M500 photo
a5a4673	LineMaster Falcon Plus photo
28dec97	LineMaster Falcon photo
e99845f	MSS 130 DVI photo

RECOMMENDATION

NEXT STEP WHEN READY

The new images are stylized renders. They read well as product shots, but the on-screen software and some machine labels contain generated text that is not legible up close. When real product photography is available, we can swap it in the same way — the frame and page layout are already built for it.
